Strong potential. Clear conditions for adoption.

Potential

AI is already a strategic priority across European health systems and healthcare providers:

100% of EU Member States rated improving patient care & health outcomes as a major or moderate driver of AI development and use in health.^[6]

94% of surveyed EU healthcare providers reported already using AI or planning to adopt it.^[10]

What can slow adoption?

Barriers

Share of EU Member States that rated each as a barrier of major importance.^[6]

41%

Financial affordability

33%

Legal uncertainty

33%

Data quality & standards

Enabler

63%

cited guidance on transparency, verifiability and explainability as having a major positive impact.^[6]

AI can help healthcare professionals turn more clinical information into usable, trustworthy evidence, **with human oversight remaining essential.**
